DETAILED ACTION

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Richerd Yoon (Reg.#42,247) on 11/20/2006.

In the Claims

Examiner contacted Applicant's representative to cancel the withdrawn claims 11-20 and 25-31.

Allowable Subject Matter/Reason's for Allowance

Claims 1-10 and 21-24 are allowed over the prior art of record as amended above in the reply filed 10/18/2006 and the Examiner's amendment.

The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to disclose either singly or in combination the claimed method of detecting a malfunction with a force in an infusion pump comprising taking current measurements from the motor to detect when the plunger is seated in the reservoir and detect a problem with the force sensor when the force sensor independently fails to register a value indicating that the plunger slide is seated in the reservoir.

The closest prior art of record is Feldman et al. (5,647,853), Jhuboo et al. (5,501,665), and Derlien (5,244,461), however these references do not disclose the method steps of taking current measurements of the motor and detecting when the plunger slide is seated in the reservoir based on the current measurements, they only disclose the use of a direct force sensor to measure force or detect an error in pump function using a positional sensor to gather data on the position of the plunger for use in indicating a problem.

Regarding claims 1 and 24, the closest prior art of record fails to teach among all the limitations the method steps that comprise taking current measurements of the motor and detecting when the plunger slide is seated in the reservoir based on the current measurements and detecting a problem with the force sensor based on the current measurements.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
